

RELIEF MAP PROJECT

Due Date: Monday, December 7, 2009

1. MAP DOUGH RECIPE: Mix 1 cup salt with 1 cup flour. Add water gradually (starting with 1/2 cup) until easy spreading consistency. The map will need a few days to dry before painting. Please feel free to use your own recipe if you have one.
2. Make your relief map on a piece of 12" x 20" heavy white tag board or foam board. PLEASE do not use a larger board. We have limited space to display the maps and like to display all of them.
3. Cut out the U.S. map and trace it onto your tag board. Next trace over the inside lines by pressing very hard with a ballpoint pen. When you remove the map you should see the indentations that outline the different landforms.
4. Title your map---U.S. RELIEF MAP
5. Use correct spelling, capitalization, and coloring when making your map key.
6. Do not use dough mixture on the Great Lakes, just color them blue.
7. Apply dough mixture on the plains area in a very thin layer.
8. Use poster paint, tempera, watercolor, acrylic paints or anything else that works. I have found that it also works to divide the dough and color it with food coloring before you put it on the map. A strong coffee mixture works to make brown dough.
9. Check samples in Room 304 for more help.

(Please return the bottom of this paper.)
